

Floor-Cleaning Procedure

Sweep the floor

Fill mop bucket with correct amount of solution.

Apply Vestec 615 Kitchen Floor Cleaner with a mop.

Scrub floor with a stiff-bristled brush.

Leave solution to allow for penetration of grease and soil.

Use a floor squeegee to direct solution towards the closest drain.

DO NOT RINSE! Allow to air dry—Vestec 615 will continue breaking down grease.

1. Shock the floor. Floors will get more slippery when you start using Vestec 615 Kitchen Floor Cleaner. This may last for 3-4 days. This happens because Vestec 615 penetrates the historic build-up or deposit of fat/oil/grease (FOG) that is on the floor and goes to work breaking up these old deposits.
2. Initial shock dose is 4 oz. of Vestec 615 Floor Cleaner per 3.8 Litres (1 US gal) of water for the first 7 days. Continue to wash your floor at the same frequency you always have.
3. After the 4th day you should take a floor brush and lightly (no muscle) go over the floor. This should be repeated at least once a week. Brushing is required because the bacteria in the Vestec 615 Floor Cleaner works up to 80 hours after each application and produces enzymes that break apart FOG and then transfer FOG to the bacteria cells where it is digested to produce CO₂ and H₂O.
4. The dose of Vestec 615 Floor Cleaner can be reduced to 2 ounces per 3.8 Litres (1 US gal) starting on week 2.

Benefits after the 2nd week:

- The appearance of the floor will improve, starting with the grout
- The floor will appear brighter
- The floor will be less slippery
- The floor will generate less odour
- The floor will generate less pests since you're removing the food source that attract pests
- The water used to clean the floor in the janitor's pail will produce less odour
- The appearance of the mop used to clean the floor will look cleaner and have less odour than before
- The pH of Vestec 615 Floor Cleaner is almost neutral which is safe for all floors and for the employee who applies it (safer than a chemical floor cleaner/degreaser)
- Vestec 615 is a "Green" environmentally friendly product
- Any Vestec 615 that goes down the drain will help keep the drains clean
- If floors are flooded at night, Vestec 615 can start cleaning areas in the kitchen that are under equipment and are hard to clean using a mop

A 4 week commitment to this product is required. Vestec 615 picks up twice the amount of FOG than standard chemical floor cleaner/degreaser and works up to 80 hours after application.

CAUTION:

Do not use CHLORINE or QUAT products on the floor when using Vestec 615 Floor Cleaner.
